

Panagiotis Chatzikallias

Software Engineer | Systems & Full-Stack

Thessaloniki, Greece | +30 697 465 2888 | apparentlyplus@gmail.com | [linkedin.com/in/panagiotischatzikallias](https://www.linkedin.com/in/panagiotischatzikallias) | github.com/ApparentlyPlus | whoareyou.plus

Summary

Software engineer with systems depth: built an x86-64 kernel, a statically-typed language and an optimising compiler end to end, and ship production full-stack and ML services at a company I co-founded. Merged contributor to **dotnet/runtime** (18.2k stars). Finished a 4-year CS degree in 3 years. **Available for full-time roles immediately.**

Education

B.S. in Computer Science, University of Macedonia | **GPA: 8.5/10** (*Excellent*) **2023 – 2027**

- **Expected Graduation: 2027.** All coursework and the thesis are complete as of 2026; the degree is formally conferred in 2027 only because national regulation bars defending an undergraduate thesis before the fourth year.
- **Relevant coursework:** Data Structures (10/10), Object-Oriented Programming (10/10), Programming Languages & Compilers (10/10), Web Services & Transactions (10/10), Big Data Analytics (10/10), Artificial Intelligence (9.5/10), Computer Architecture (9/10)

Experience

Intellectiva AI — *Software Engineer (Co-Founder)* **2025 – Present**

- Built a passenger-flow regression model for Athens transit over open data (**Python, ONNX**) with a **Node.js** real-time frontend, re-timing trains against subway congestion. Won 2nd of 40+ teams at the Apps4Athens hackathon; now in pilot discussions with OASA, the Athens transport authority.
- Architected a Small Language Model pipeline for **Meteo.gr**, Greece's largest weather service, integrated with **Meta's** messaging **APIs** to serve high-concurrency user queries in production.

HackTheBox — *Contract Content Engineer (paid)* **2024**

- Designed and shipped a cryptography challenge to HackTheBox's live platform under paid contract. **339 users solved it; rated 4.9/5 across 119 reviews.**

Engineering Projects

PawStack — a toolchain where your program is the operating system | *B.S. Thesis* **2024 – 2026**

- General-purpose kernels link an allocator whether or not you allocate. PawStack inverts that: the compiler builds a capability set while lowering to IR, so heap use marks the allocator and threading marks the scheduler. Unreferenced subsystems never compile in. Two commands from source to a bootable ISO. Written solo across three repositories:
 - **GatOS**, a modular x86-64 kernel in freestanding **C**, covering memory management, thread scheduling, userspace execution, display and USB drivers. **CI/CD** builds on Linux, Windows, macOS.
 - **Gata**, a statically-typed, object-oriented systems language with a 24-module standard library.
 - **Appa**, the compiler: frontend, IR and backend on **C#** / **.NET 10 AOT**. Emits C for portability and drives the kernel build.

Open-source contributor — *dotnet/runtime, myuom* **2025 – Present**

- Ongoing contributor to **dotnet/runtime** (**18.2k stars, 3,400 contributors**), the codebase behind every C# program that ships, with merged code and design discussion in its issue threads. Also contributing to myuom, a student platform used at my university.

UniNotes — collaborative study platform | *Full-stack* **2024**

- Note-taking platform in **Blazor** / **.NET** over **MongoDB and SQL**, with real-time sync and full authentication. Deployed and test-run with students at the University of Macedonia.

Technical Skills

Languages: C, C++, C#, Python, JavaScript / TypeScript, SQL, Java, x86 Assembly, HTML/CSS

Frameworks & Libraries: .NET (Blazor, ASP.NET), Node.js, Flask, MongoDB, Transformers, ONNX

Tools & Practices: Git, GitHub Actions, CI/CD, Docker, Linux, REST APIs, QEMU, Agile collaboration

Core: Algorithms & Data Structures, OOP, Compilers, Operating Systems, Distributed & Parallel Computing

Languages (spoken): Greek (Native), English (Near-Native), French (Elementary)

Honors & Awards

- **National Team Member for Greece:** selected to represent the country at the European Cyber Security Challenge after qualifying **3rd nationwide**; placed **11th of 28 nations** in Europe.
- **10th of 955 teams from 94 countries** at the HackTheBox University CTF, a global inter-university competition (*top 1%*).
- **ICPC Regional Finalist:** SEERC 2025, South Eastern European Regional Contest of the International Collegiate Programming Contest.
- **CVE approved for a coordinated vulnerability disclosure** in an app with **100k+ downloads**; drove the fix to release with the vendor and MITRE.
- **2nd place, Apps4Athens 2025**, a national civic-technology hackathon.
